Merging Decisions for 2 projects- ex3

Before writing the code for ex2, we planned the UML together since we knew we will be coding partners in this course.

Hence, the methods are all doing the same purpose (but implemented differently of course). Since we wanted to use one projects so we won't face problems while merging them, we took the most from Raz's project and the function to receive the user input from Tomer since they are better implemented for a bigger board.
